TechLaw Consultants, Inc.: New Name, Restructuring, Reflect Growth and Opportunity for a Trusted Environmental Firm

CHANTILLY, VA (Feb. 20, 2020) – In a move to harness corporate growth potential and maximize operating efficiencies, TechLaw Holdings, Inc., is now TechLaw Consultants, Inc. In addition to dropping the holding company structure, the change means that the environmental consulting company's previously incorporated subsidiaries—TechLaw and TLI Solutions—will drop the 'Inc.' from their names, while operating as part of TechLaw Consultants, Inc.

"This change reflects a greater unity in our company, which will lead to more sharing of ideas and services, more cost-effective operations and, most importantly, one company that is responsive to an even-wider array of clients," says Brian Shutler, Chairman and CEO of TechLaw Consultants, Inc. "We believe this represents an opportunity for us to grow our business across numerous areas in the public and private sector."

The name change has been approved by the Virginia Secretary of State. TechLaw Consultants, Inc., like the predecessor holding company, will remain based in Chantilly, Va.

The TechLaw name goes back to when TechLaw, Inc., was founded in 1983, with the US Environmental Protection Agency as its primary client. The holding company structure was adopted in 2006 as TechLaw, Inc., was diversifying operations in federal, state and local environmental consulting, as well as litigation support, resulting in three different, incorporated companies. Since that time, TechLaw Holdings sold off its litigation support subsidiary (TechLaw Solutions, Inc.), while also launching AlterEcho, which concentrates exclusively on private-sector environmental consulting.

As AlterEcho grew extensively over the last several years, as did business with the US Department of Defense—combined with a 37-year reputation primarily supporting the US EPA—it became clear that the company and its clients would benefit from a more streamlined operation, Shutler says.

On the surface, he says, most clients will not likely notice many differences: TechLaw will continue to provide consulting support to US EPA and several state and local agencies, while TLI Solutions will primarily support the US DoD and Department of Energy. AlterEcho will continue providing its environmental consulting expertise to private-sector clients.

"What all of our clients will ultimately benefit from are the shared resources and expertise that will provide even greater value," says Patricia Derocher, Chief Operating Officer of TechLaw Consultants, Inc.

“We will have a wide range of skills available under one roof, ready to meet any client’s needs at any point.”

Adds Shutler: “With 200 employees and 17 offices across the country, we offer decades of experience and expertise, along with client collaboration and communication that make us accessible—and effective.”

About TechLaw: TechLaw (www.techlawinc.com) provides a wide range of technical environmental consulting, holding more than \$117 million in prime contracts across multiple support programs for the US Environmental Protection Agency, along with several state and local contracts. We help clients assess performance, manage risk, find sustainable remedies, and implement environmental solutions.

About TLI Solutions: TLI Solutions (www.tlisolutions.com) provides environmental and engineering technical support and project management, primarily in the area of defense and munitions remediation. Primary clients include the US Army Corps of Engineers, the US Department of Defense, the US Department of Energy, and the US General Services Administration.

About AlterEcho: AlterEcho (www.alterecho.com) helps businesses of every size Do Well AND Do Good. Our team includes attorneys, engineers, chemists, hydrogeologists and environmental scientists with more than three decades of experience working with federal and state environmental agencies, non-profits, law firms, and companies ranging from start-ups to Fortune 500 firms.
